

December 18th, 2020

Dear Samena Members;

As some of you may have heard Samena has been 2020'ed once again!

We have recently discovered that the outdoor pool has a leak somewhere between the pump and the surge pit. In order to find the exact location, we have had to empty the pool. Once we are able to identify the extent of the issue, we will have a better idea of a timeline for repair. At this point we plan to have the outdoor pool closed all next week. Best case scenario we will be able to open the outdoor pool again on December 28th. Stay tuned, I will be back in your inbox once there is more information available.

In order to add more lap swim opportunities, we have delayed the filter maintenance on the indoor pool scheduled for this weekend. Also, for this weekend and next week, we have added availability for family swims in the wading pool (it is covered and a balmy 94 degrees ☺).

The staff is working as quickly and efficiently as possible to get this issue remedied. Thank you for your continued patience.

If anyone happens to have any spare Holiday miracles feel free to send them our way!

Thank you;
Tonya
